The US National Vulnerability Database currently includes more than 99,900 known software flaws, including approximately 40,000 CVEs of the highest severity. Nearly 15,000 new vulnerabilities were added in 2017.

Each software vulnerability represents a point of attack – most often against a web application. In a software driven world under siege from malicious hackers, securing applications is a requirement for all businesses and government agencies.

Benefits
- **No false positives.** Waratek Secure will never produce a false positive and we are so confident in that feature that we back it up with a $10,000 USD financial guarantee.
- **Ultra-low performance overhead.** Waratek Secure is built on the ARMR Application Security Management Platform, which means that if your applications experience any performance impact, it should be less than 3 percent. Some of our clients have even reported performance improvements in certain conditions.
- **No code changes required.** Security is risky. Patches and security updates often mean adjusting source code and taking an application down for maintenance. Waratek Secure will safeguard your applications without the need to worry about application failure or financial impacts from downtime.

Always On Security
Waratek Secure offers “always on” security protections that ensure 100% accuracy in detecting code injection attacks. A lightweight runtime plugin agent for Java and .NET-based applications, Waratek Secure instantly protects against OWASP Top Ten, SANS Top 25, and other common attacks that exploit known software flaws.

Waratek Secure installs in minutes and instantly protects applications without requiring code changes or routine tuning. Best of all, Waratek Secure has an ultra-low performance impact on an application and it produces no false positives.

Waratek Secure is backed by a rules subscription that allows you to select out-of-the box protections as well as apply custom rules without downtime.
Waratek Over Other RASP Solutions

- No false positives, guaranteed
- Ultra-low performance overhead
- Installs in minutes; instant protection
- No source code changes required
- No tuning; no white or black list maintenance
- Seamless integration with Waratek Patch agent
- Write and deploy custom rules with no restart

“WARATEK WAS REQUIRED TO PROTECT THE FULL APPLICATION STACK, INCLUDING 3RD PARTY COMPONENTS, AS WELL AS ZERO DAY VULNERABILITIES. WARATEK PASSED THE EVALUATION WITH FLYING COLOURS ON CRITERIA SUCH AS FALSE POSITIVE RATE (FPR), EASE OF INSTALLATION, NUMBER OF CODE CHANGES REQUIRED, COMPATIBILITY AND PERFORMANCE.”
